What Is Elk Finance?

- Elk Finance is a **decentralized network for cross-chain liquidity**.
- The Elk ecosystem introduces a **seamless** process for anyone **exchanging cryptocurrencies**.
- Our motto is **Any chain, anytime, anywhere**.

Why Elk Outperforms Traditional Bridges

- Core simplicity.** Only ELK token moves through the mainnet core. This solves the liquidity problems that bridges face, while removing a barrier for scalability.
- Fast, cheap, secure.** Elk mainnet performs one simple task: moving ELK. This guarantees tokens won't get lost or stuck, and greatly increases the speed and efficiency of transactions.
- Cross-chain swaps.** Elk is designed to move value, not just tokens. This introduces new possibilities like cross-chain swaps, loans, and even LP migration.
- Trustless:** ElkNet is fully decentralized.

Elk Combines Several Innovative Features:

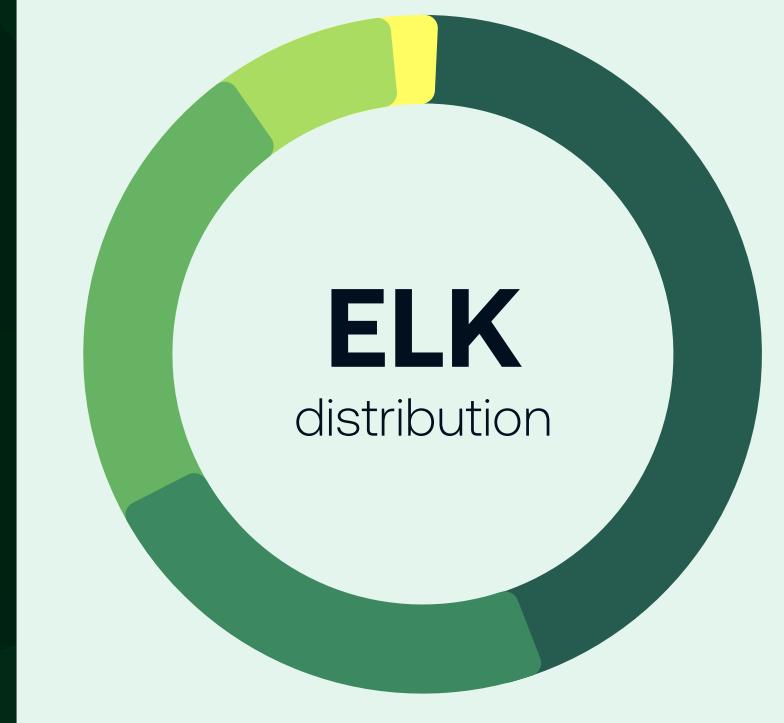

Cross-chain utility token for value transfer (\$ELK)

Non-Fungible Tokens (Moose NFTs) with unique abilities and features

Cross-chain stablecoin for value transfer and loans (\$CHFT)

Impermanent Loss Protection (ILP) for our liquidity providers

ELK Tokenomics

Total ELK Supply: **42 424 242**

Total ELK Issued: **4,923,174**

Market Cap: **13,834,119 USD**

Chains Supported

Our Socials

The Road To Elk Mainnet

Cross-chain transfer

Cross-chain transfer of SELK token. 100 \$ELK per transfer.

Cross-chain swaps

Cross-chain transfer of SELK token. 10000 \$ELK per transfer.

Elk SDK

Elk SDK for developers and platforms to build on Elk.

Cross-chain transfer

Cross-chain transfer of \$ELK token. 100000 \$ELK per transfer.

Stable coin

\$CHFT cross-chain stablecoin.

Mainnet Node

Ability for users to run an Elk mainnet node.

Cross-chain transfer

Cross-chain transfer of \$ELK token. Unlimited

Staking & Delegation

\$ELK staking and delegation for mainnet nodes.

Para node

Ability for users to run an Elk para node (requires Moose NFT).

Proxy tokens

Initial support for proxy tokens.

Multi-chain tokens

Initial support for multi-chain tokens.

Cross-chain loans

Initial support for cross-chain loans

Proxy tokens

Improved support for proxy tokens

Moose + Para nodes

Delegation of Moose to para nodes
